BioSysteM Research Retreat in Ettal

My road to founding and agentic bioengineering

by Tim Kucera

© Imaginary Biolabs GmbH

Founder trajectory

Wet lab, engineering, and modeling in search for programmable biology

© Imaginary Biolabs GmbH

BSc
EKU Tübingen
Biology

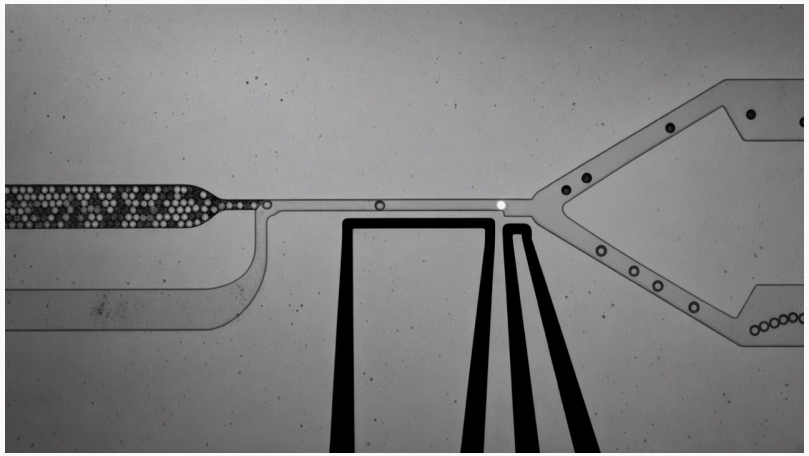

MSc
ETH Zürich
Biotechnology

2021
DropSort
Droplet Sorting Software

PhD
ETH / MPI
Molecular Machine Learning

2025
Imaginary Biolabs
AI infrastructure for Biotech

2026
Accubator
Lab-as-a-service

High-throughput droplet sorting on a microfluidic chip

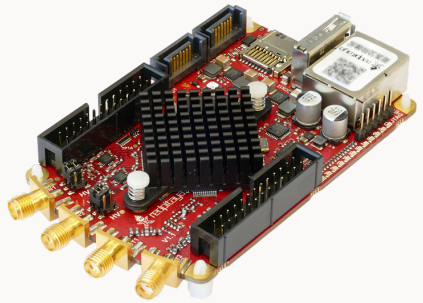

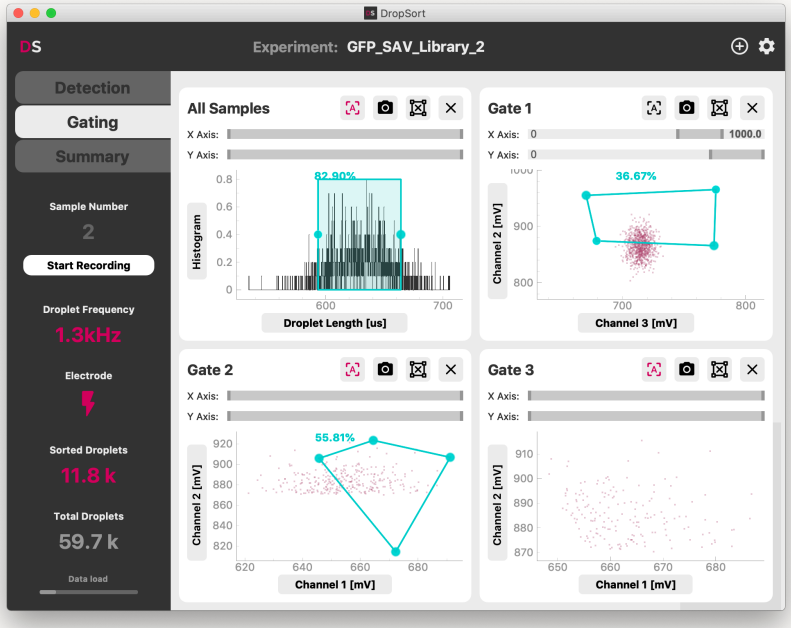

Image adapted from Wikimedia by Geek3 under CC BY-SA 4.0

A high-performance data processing card (FPGA)

DropSort software for running FPGA-based fluorescence activated droplet sorting.

Thinking about a company? Just do it!

Much of what you are doing as a researcher has a market value

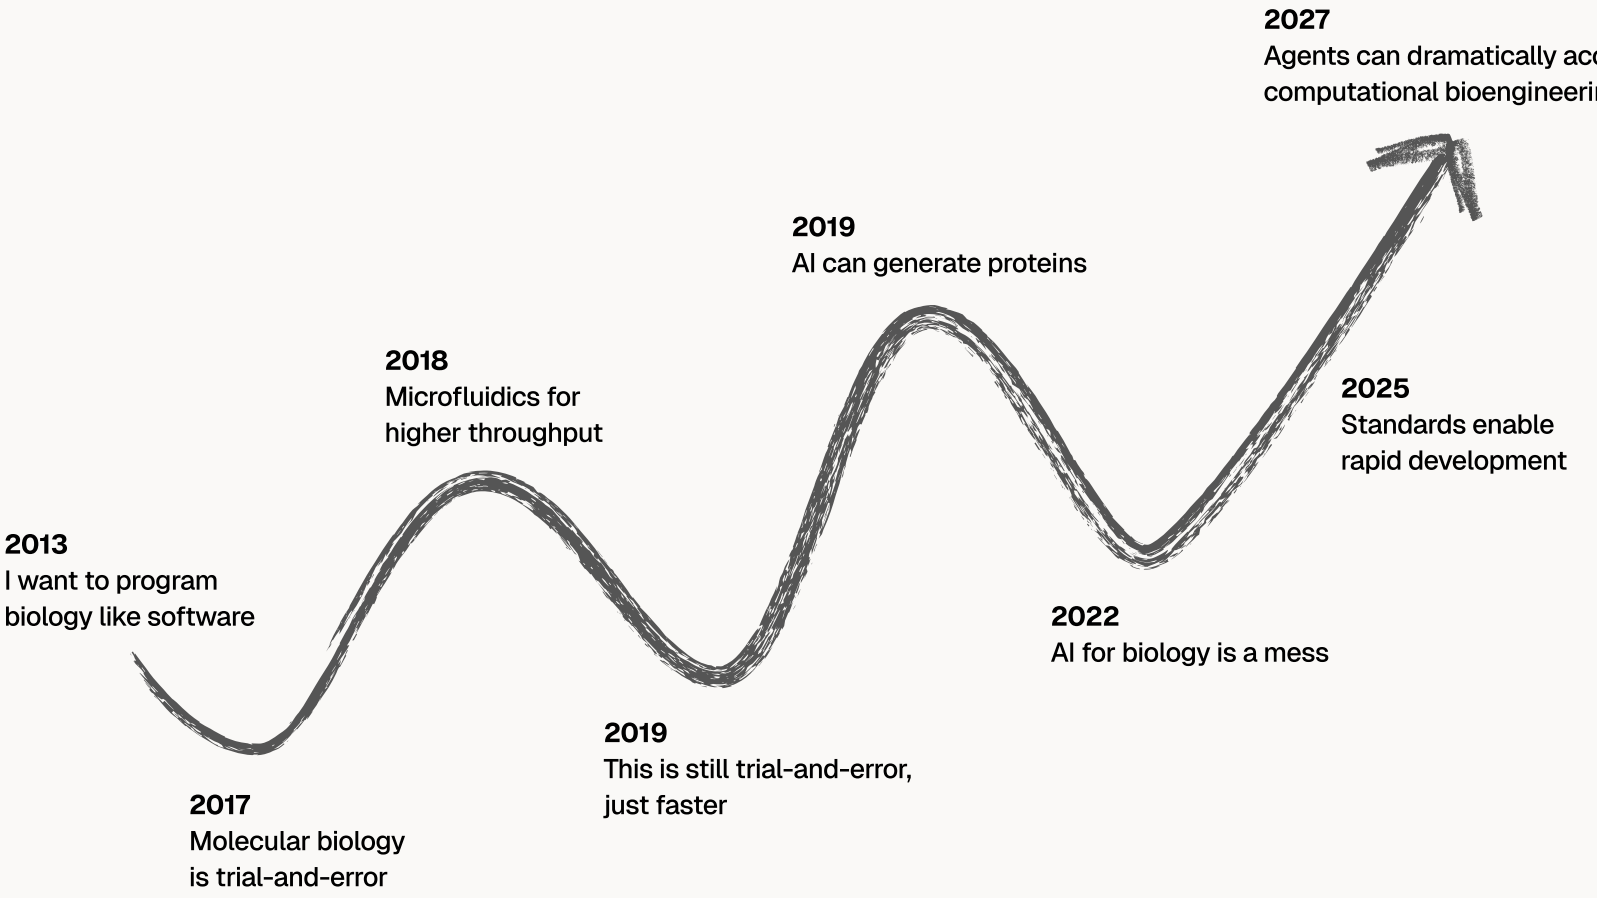

Founding is easy and does not always need much money or time

Be open to opportunities and they will come

© Imaginary Biolabs GmbH

Where are we now with programmable biology?

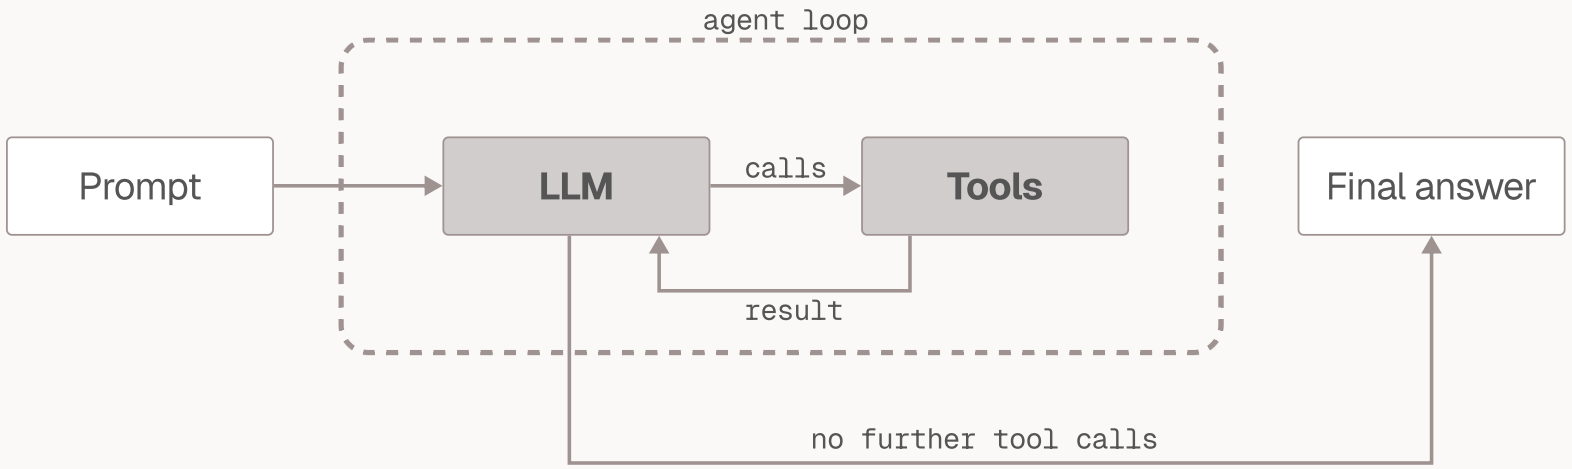

© Imaginary Biolabs GmbH

What becomes possible

Natural-language prompts on real infrastructure

We created this binder, will it have off-targets in our model organism? How much can we trust your prediction?

binder.pdb

Turn our DMS assay results into a dataset and train a model to predict the next mutations to test.

dms_assay.csv

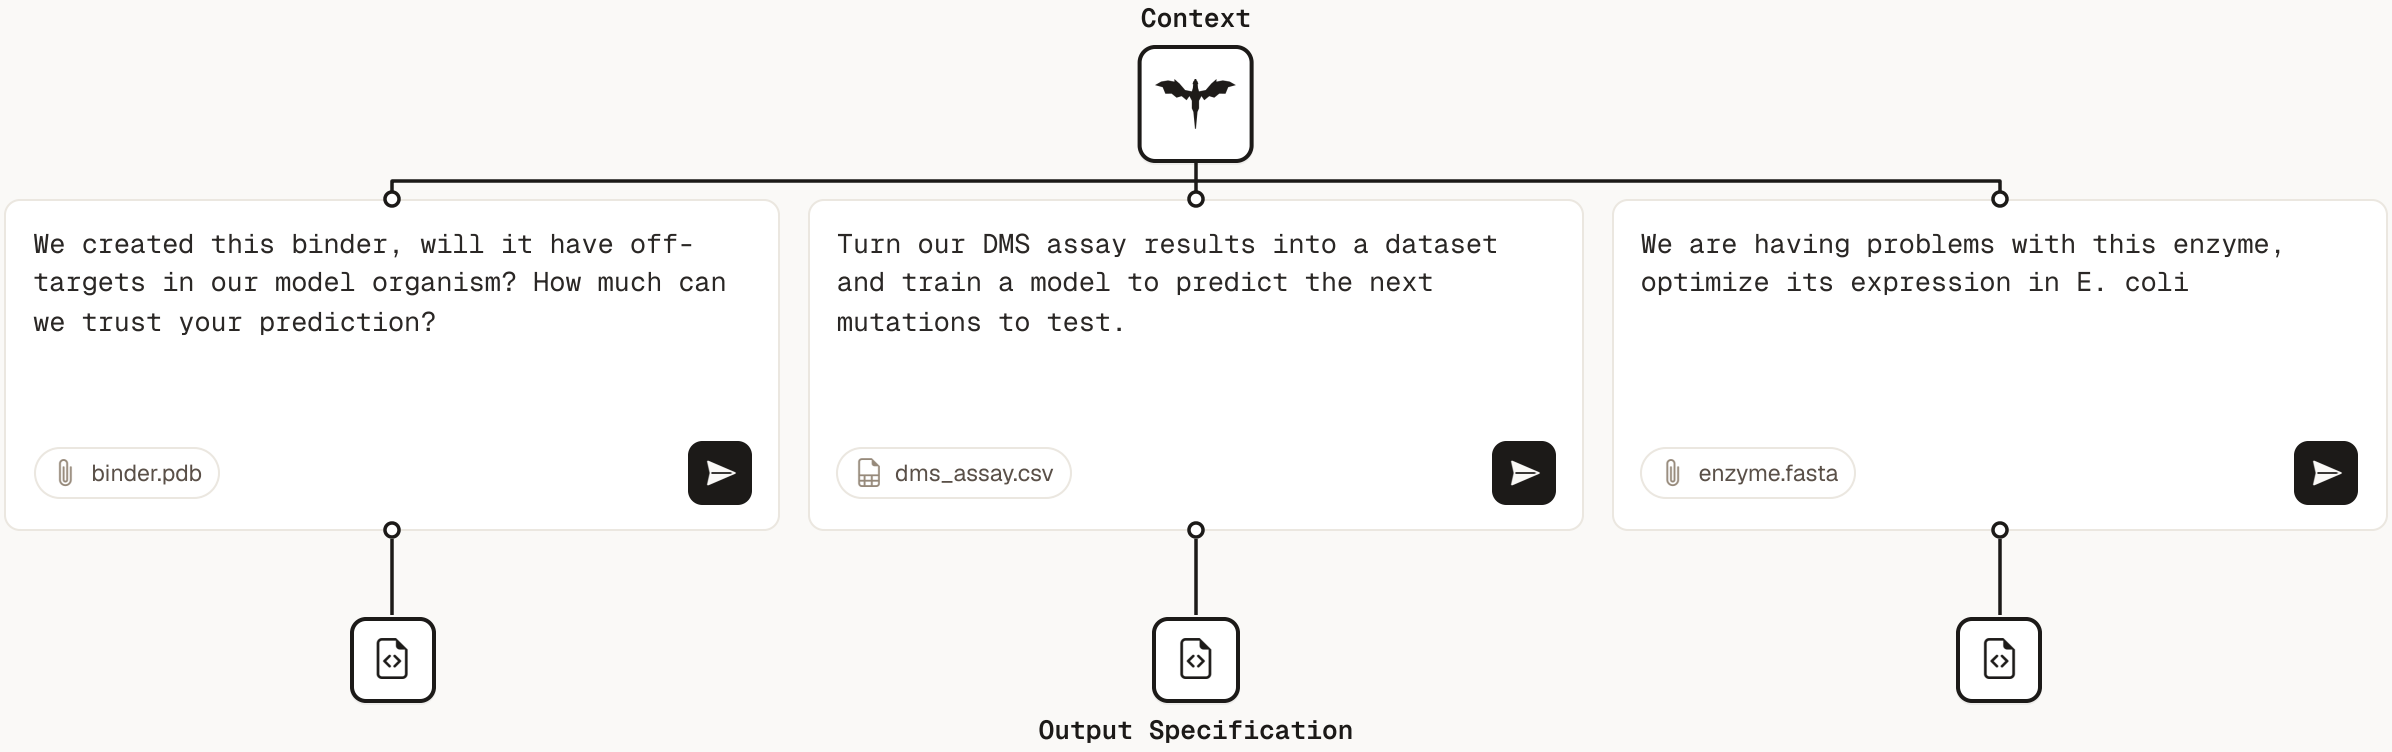

We are having problems with this enzyme, optimize its expression in E. coli

enzyme.fasta

The long-term vision for Imaginary

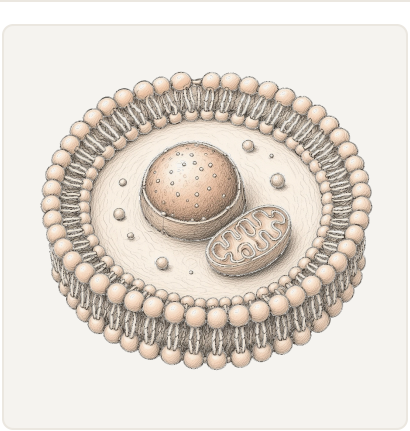

From the molecular level to computational design of biological systems

Molecules

Systems of molecules

Synthetic cells

Multicellular synthetic organisms

© Imaginary Biolabs GmbH

Get in touch!

BETA LAUNCH IN JANUARY

...if you would like to test the platform

SYSTEMS BIOLOGY

...if you would like feature support beyond molecules

PROGRAMMABLE BIOLOGY

...if you would like to join us in making biology programmable

IMAGINARY BIOLABS

AI infrastructure for building biological systems
